Accelerate Your SAP Implementation with Genesis Consulting
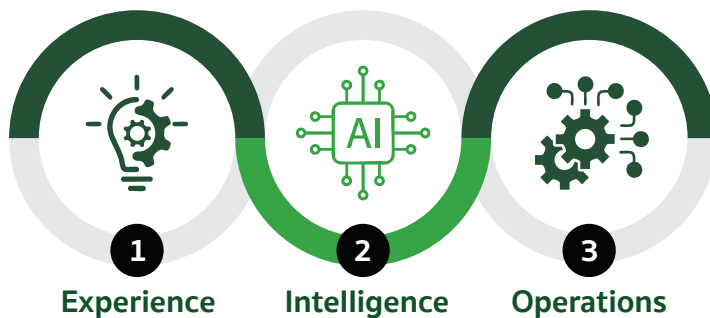

Genesis Consulting Tools for Acceleration

Our proprietary SAP S/4HANA implementation tools transform business agility from buzzword to reality, delivering a fully configured system in a fraction of the time enabling your business to respond faster to market demands, significantly reduce implementation and operating costs, and maximize ROI - getting you from implementation to competitive advantage in the shortest possible timeframe.

Gen AI-Powered Automation for Accelerated SAP Implementations

Revolutionize SAP development, migrations, and maintenance with an intelligent, context-aware GenAI assistant that significantly boosts productivity, improves code quality, accelerates project timelines, and enhances operational efficiency across all SAP project types.

Continuous Integration and Delivery Service by Genesis

Our SAP Continuous Integration and Delivery service streamlines your development lifecycle with predefined CI/CD pipelines that automatically test, build, and deploy code changes. By minimizing the time between commit and production while validating every line of code, we help you achieve shorter lead times and significantly reduce error rates.

Our ready-to-use pipelines leveraging Jira, GitHub, Jenkins and SAP gCTS follow SAP's proven best practices, eliminating complex setup procedures and accelerating your CI/CD implementation. As a fully managed service, we handle the entire underlying infrastructure, allowing your team to focus exclusively on innovation rather than maintenance—delivering faster results with greater reliability.

*Moving from a **predictive, phase-gated hybrid (agilefall) model** with teams working on iterations...*

*to a **lean-agile** scaled customer centric and product focused approach with an entire system iterating...*

520% ROI

520% projected three-year ROI with CI/CD automation

40% faster time to first successful integration test cycle

6x more transports delivered per sprint without increase in FTEs

$1.2M average reduction in hypercare-related incident costs

90% reduction in manual QA/test execution effort

75% reduction in deployment errors via automated gCTS process

100% traceability from Jira ticket to Production deployment

65% faster turn-around on regulatory changes and hotfixes

What Our Successful Clients Have to Say

■ What stood out with Genesis was how practical and grounded their team was, and they actually helped us rethink how we deliver SAP changes. The CI/CD pipeline they set up gave us a reliable, repeatable process that shortened test cycles and reduced production issues. For the first time, we had innovative automation of deployments to our environments. Their team worked well with ours, even under pressure, and gave us confidence every step of the way.

CIO

■ The GenAI assistant from Genesis changed how our SAP teams work. It's not just a productivity boost, it helped our developers produce cleaner code, faster, and with fewer handoffs. We've cut development time by over a third, improved code quality across the board, and it's already reducing the number of defects reaching QA. What's more impressive is how it enforces security and policy guardrails without slowing us down. Honestly, I wish we had this during our ECC days.
